

GEOMETRI

Ett alldeles eget formelblad

Area (yta):

Rektangel

höjd, h

bas, b

$$\text{Area} = b \cdot h$$

Kvadrat

sida, s

sida, s

$$\text{Area} = s \cdot s = s^2$$

Parallelogram

bas, b

$$\text{Area} = b \cdot h$$

Triangel

$$\text{Area} = \frac{b \cdot h}{2}$$

Cirkel

d = diameter

r = radie

$$\text{Omkrets} = \pi \cdot d \approx 3,14 \cdot d$$

$$\text{Area} = \pi \cdot r^2 \approx 3,14 \cdot r^2$$

Volym (innehåll)

Rätblock

Kub

Cylinder

$$\text{Volym} = B \cdot h$$

B = Basytans area, h = höjd

Volym VG - nivå

Pyramid

Kon

$$V = \frac{B \cdot h}{3}$$

Konens buktiga yta kallas mantelyta.

$$\text{Mantelytans area} = \pi \cdot r \cdot s$$

Klot

$$\text{Volym} = \frac{4\pi \cdot r^3}{3}$$

Ytan på ett klot kallas sfär.

$$\text{Sfärens area} = 4\pi \cdot r^2$$

Gud va coolt!
Ett eget
formelblad!
